EXPLANATION OF AMADEUS ACCESS LEVELS FOR INFORMATION ON ACCESS AND FUNCTION LEVELS BY AN AIR-
LINE, REFER TO GG PCA XX
Amadeus Complete Access gives the highest level of connec tivity between an airline and Amadeus, including last-seat
availability and immediate confirmation. Example of airlines
AMADEUS COMPLETE ACCESS (/) supporting this feature are BA, AF, The access level is repre-
sented by a (/) in the Amadeus availability displays. Note:-Bu If the airline is not the Altea airline then we can still perform
ACL or 1XXad entry if supported by the airline.
Amadeus Access Sell offers a fully secured sale for each sea
When a seat sell request is made, Amadeus checks the flight
in the airline's own inventory system. According to the status the sale is confirmed, waitlisted, or rejected immediately. If
the airline confirms the booking at segment sell time, a HK
status is returned. The Airline's own record locator is automated and the status is returned. The Airline's own record locator is automated and the status is returned. The Airline's own record locator is automated and the status is returned.
ically appended to the Amadeus PNR after EOT.If the airline
does not confirm the booking, a UC or HL status code is returned. Note: Agents may use direct access to get last sea
availability Ex JL

DIRECT ACCESS (DIR) (*)	Direct Access provides a real-time link to the airline's own system to display an accurate availability at the time the request is made. This link is created through the use of Direct Access entries (ACL or 1xxAD entries). This functionality provides last seat availability of the airline on a secondary display. Seats sold on this real time link carry a LK status code. The airline may have the record locator return option supported. It is important that the sell entry be made within 3 minutes of accessing the direct access display.
STANDARD ACCESS	Schedules are updated on a weekly basis. When you book a seat on a standard access airline, the airline may revert with the confirmation or rejection of sale within 12 hours. If the airline supports Record Return option, its own record locator is appended to the PNR. Seats sold are in SS status code.
AMADEUS TICKETLESS ACCESS (-)	Amadeus Ticketless Access is a new type of access that enables end users to get availability and schedules from the low cost carriers in the Amadeus principal displays. Ticketless Airlines are identified by a '-' in the Access indicator field and by the letter "Y" in the Ticketless Access field of the carrier's GG PCA page. For more information refer to HE TLA. Ex AK
	A Slash indicator, (/), displayed before the Departure (/

There is a functionality known as "Automated Ticketing Timelimit". This functionality enables the airlinesto automatically assign and manage the timelimts for ticket issuance in Amadeus. The PNR contains two elements "OPW" and "OPC". OPW element notifies your office by queue placement 24 hours prior to the automatic cancellation of the AIR segments that are associated to an ATL. The "OPC" element is used to track the ticketing time limit, to initiate automatic cancellation of ATL associated segments and to queue place the PNR after cancellation. The que catagory associated with Automated Ticketing Timelimit is Queue 1 and Catagory 7 and 8

"AIRLINE OFFICES CAN ADD AN OPQ OPTION ELEMENT TO THE PNR SO THAT ON A SPECIFIED DATE, THE PNR IS PLACED ON THE QUEUE OF A DESIGNATED OFFICE. THE OPQ ELEMENT CAN ONLY BE ENTERED BY AUTHORIZED ATO/CTOS. IF YOU ENTER AN OPQ ELEMENT, THE PNR WILL BE SENT TO THE QUEUE PLANNER OF THE DESIGNATED OFFICE AT END OF TRANSACTION. ON THE SCHEDULED DATE, DURING THE NIGHTLY FILE MAINTENANCE PROCESS, THE PNR WILL BE PLACED ON THE QUEUE OF THE DESIGNATED OFFICE.

HOTELS HE HOTEL

There are 4 types of access levels that Amadeus provides for Hotel companies. The level of access is indicated in the availability display in the space between the hotel chain code and the hotel name

ACCESS LEVEL	DESCRIPTION
Dynamic Access	Indicated by a (!) in the availability display. This is the highest level of connectivity and links the Amadeus Central System with the hotel company's own reservation system. All availability and rates for the hotel chain are returned seamlessly from the hotel chain's own system. The hotel company responds with a confirmation and other information within four to eight seconds.
Hotel Complete Access Plus	Indicated by a (+) in the avaialbility display. Information on the single property display is directly from the hotel chain's reservation system. Bookings are sent to the hotel chain via a high-speed communication link when the sale is made and the hotel system immediately returns the confirmation number and other data.
Hotel Complete Access	Indicated by a (/) in the availability display The information on the availability display comes from the distribution system. Bookings are processed like Complete Access Plus. A confirmation number is returned within four to eight seconds, even before you save the PNR.
Hotel Standard Access	Indicated by a blank space () in the availability display. Booking requests are sent to the hotel chain via teletype when you save your PNR. The hotel then updates your PNR with the confirmation number.

BEST AVAILABLE RATE (BAR) GUARANTEE

The BAR indicator acts as a guarantee that the rates available in the distribution system are the best available public rates for Rack Rate, Non negotiated rates, Corporate Rates, Weekend Rates, Lowest Unrestricted Rates, Promotional Search Rates. The BAR is guaranteed by the hotel chain. In the event of a rate discrepancy, contact the hotel chain provider directly.

HOTEL POINTS OF REFERENCE HE PO

A Point of Reference is a building/monument or any other type of landmark considered important enough to be used as a criterion when searching for and booking hotels. Each point of reference is assigned to a category according to its nature. For example: An airport, a university, a sports stadium or a tourist attraction in a particular country. You can search for hotels that are less than a certain distance from the point of reference. In some countries partial geo coding is applied which means that, one or several areas of a country are including in POR but not the whole country.

Note: A change in the hotel segment may result in the segment getting cancelled and rebooked. There are 2 types of options, Critical and Non-Critical. For Complete Access and Complete Access Plus car companies, when you enter a critical option, Amadeus tries to book a new segment. If the new request is accepted, the old segment is cancelled. If the new request is rejected, the old segment is retained. In the case of non-critical options, the new information is added to the existing reservation, the segment is modified, but not rebooked. Which options are Critical and which are Non - critical varies from company to company. To see which options are critical for a company, see HE HOTEL XX (where XX=Company code) The following options cannot be modified for Hotel Complete Access Plus chains: /RO- /RT- /SR- For Standard Access bookings, any change causes the old segment to be cancelled and a new one to be booked. You cannot modify or cancel a hotel segment if the guest has already checked in or if it is a past date segment.

For Car Standard Access Companies, any change causes the old segment to be cancelled and a new one to be booked. For complete access bookings which options cause a rebook varies between the Complete Access companies. If your changes cause the old segment to be cancelled, then the rebooking is only made if all the sale conditions are met. If they are not met, Amadeus ignores the change request but gives a new availability display based on the modified parameters, and an explanation of why the sale request was rejected. Check to see if the option you are modifying is a critical option. Critical options are those that affect the price of the booking.
